Slot-Slot possible?	Yes	Yes
Double-check possible?	Yes (Two correlators such as auto-correlator and cross-correlator are used)	Yes (Auto-correlator)
Single frame synchronization word can be used for frame synchronization?	Yes since a frame synchronization word has -1 out-of-phase coefficients	May not be feasible because of +4 or -4 out-of-phase coefficients. The +4 or -4 side lobes can be zero through some particular processing using preferred pair of frame synchronization words.
Frame synchronization words	All 8 frame synchronization words are made out of a single PM code	All 8 frame synchronization words have +4 or -4 out-of-phase coefficient and minus peak value at middle shift
Autocorrelation function	$R(\tau)=15, \tau=0$ $R(\tau)=-1, \text{ elsewhere}$	$R(\tau)=16, \tau=0$ $R(\tau)=-16, \tau=8$ $R(\tau)=0, +4, \text{ or } -4, \text{ elsewhere}$
